Product Description

Product Description

GE FANUC IC695ALG808 RX3i Isolated Analog Output Module

Technical Application

Isolated Analog Voltage/Current Output module IC695ALG808 provides eight configurable voltage or current output channels. Analog channels can be configured for these output ranges:

- Current: 0 to 20mA, 4 to 20mA
- Voltage: +/- 10V, 0 to 10V

The module must be located in an RX3i Universal Backplane. It requires an RX3i CPU with firmware version 5.0 or later. Machine Edition Version 5.7 SP3 Logic Developer-PLC or later must be used for configuration. These modules can be used with a Box-style (IC694TBB032), Extended

Box-style (IC694TBB132), Spring-style (IC694TBS032), or Extended Spring-style (IC694TBS132) Terminal Block. Extended terminal blocks

provide the extra shroud depth needed for shielded wiring. See the PACSystems RX3i System Manual, GFK-2314 revision B or later for more

information about Terminal Blocks. Terminal Blocks are ordered separately.

The module must receive 24 VDC field power from an external source. The external source must be connected directly to the module's terminal block. It cannot be connected via the TB1 connector on the RX3i Universal Backplane.
